

Acknowledgments

The United States Environmental Protection Agency's Office of Science and Technology produced this report with technical assistance from Tetra Tech, Inc., under EPA Contract Number 68-C3-0374 and Versar, Inc., under EPA Contract Number 68-C3-0013. Several staff people from EPA regional offices and other headquarters program offices reviewed previous drafts of this document, and we greatly appreciate their efforts and helpful comments. We wish to thank Anthony Pait of the National Oceanic and Atmospheric Administration (NOAA) for his review of the original hazard analysis methodology and Ruth Hull of the Oak Ridge National Laboratory for providing many measures of the physical-chemical properties for specific chemicals. We also wish to acknowledge the following persons, who provided external peer review of a previous working report employing the hazard analysis methodology on 1992 facility release data: William J. Adams, formerly of Analytical Bio-Chemistry Laboratories, Inc., in Columbia, Missouri; Robert Huggett, formerly of the Virginia Institute of Marine Science in Norfolk, Virginia; Richard Kimerle of the Monsanto Company in St. Louis, Missouri; and Keith Phillips of the State of Washington Department of Ecology in Olympia, Washington. We greatly appreciate their insightful comments.
